ARCHITECTURAL ALUMINIUM SYSTEMS

Designing function & reliability into entrances

In this seminar, Comar, one of the UK's leading aluminium systems companies looks at the issues that influence the function of main entrance design and technology.

This seminar aims to offer an understanding of how user expectation influences door design, and links this with hardware selection, entrance configuration and floor finishes to improve client satisfaction.

SEMINAR OVERVIEW

- The usage and user expectation differences between residential, light commercial and main entrance doors
- How this influences door design and weather performance
- Formal definitions of light medium and heavy duty door applications
- Commercial door construction, and the design considerations created by low thresholds
- Issues concerning ease of door opening, versus closer action, and weatherproofing the entrance
- An overview of entrance framing systems, its influence on aesthetics.
- Safety legislation, Building Regulations and British Standards

Time.....

Lunch and refreshments will be provided

Seminar Preparation

Delegates are asked to each prepare a list of their 3 most important aspects for a main commercial or retail entrance.

They will be collected on arrival and the results of these and others will then be addressed as part of the seminar.
