

**Reassurance from Comar 5P.i. windows:
sustainability & Document L compliance
come as standard.**

**SPECIALISTS IN
ARCHITECTURAL
ALUMINIUM SYSTEMS**

Comar 5P.i. aluminium windows are sustainable, thermally efficient and offer longevity. Their raw material, aluminium, does not impact on the environment because over 75% of aluminium used in the world has been recycled. Thermal efficiency is achieved through polyamide insulation or P.i. which ensures that not only have you specified or fabricated an environmentally friendly product, you have selected a product which actively reduces the amount of energy that the building loses, thus cutting energy waste.

For further information contact Comar Architectural Aluminium Systems, where our project consultants can supply you with NBS Specifications from NBS Plus, U-Value and wind loading calculations. Please call 020 8685 9685, or visit www.comar-alu.co.uk
